Record #: 2016-050

Name of bird form: Neotropic Cormorant

Committee member name: Greg Lambeth

Date of review: September 17, 2016

Circulation number: 1st

Vote: A - E

Comments:

There is no written documentation to speak of that accompanies this record, but there are a total of six photographs. The first three are somewhat inconclusive to me, but photographs 4, 5 and 6 (standing in # 4 and swimming in # 5,6) clearly show a much smaller cormorant than the DC Cormorants that are nearby. The bird is long-tailed, short-billed.

Comments:

I found this bird, called Frank. He got the bird and provided doc and photo. I believe the same bird is the one Doug Hommert photographed. I do NOT believe there are 2 birds.
